

Interactive HTML Assignment

Build “TechFest 2026” — an interactive page using **pure HTML** (no CSS, no JS)

DURATION

45 minutes

HTML Essentials

FOCUS

Forms & Interactivity

SUBMIT AS

index.html

THE BRIEF

Your college is hosting **TechFest 2026**. Build a single-page **registration & info page** in one HTML file. Visitors should be able to **jump between sections**, **expand FAQs**, and **register** via a form — all using HTML's built-in interactive elements. No CSS and no JavaScript: the goal is to see how much interactivity raw HTML gives you.

Interactivity rule: the page must work without scripts — use `<details>` for click-to-expand FAQs, `href="#id"` anchor links for in-page navigation, and native form inputs + validation (`required`, `type`, `pattern`).

Learning Objectives

- ✓ Write a valid HTML5 document with semantic structure
- ✓ Use native interactive elements (details, anchors)
- ✓ Build forms with many input types & labels
- ✓ Apply native validation without JavaScript

Tasks

Part A • Structure & Navigation

~10 min

- 1 Set up an HTML5 boilerplate — `<!DOCTYPE html>`, `<html lang>`, and a `<head>` with charset, viewport & a `<title>`.
- 2 Lay out the page with semantic tags: `<header>`, `<nav>`, `<main>`, `<footer>`.
- 3 In the `<nav>`, add anchor links that jump to in-page sections using `href="#about"`, `href="#schedule"`, `href="#register"`.
- 4 Give each `<section>` a matching `id` so the nav links actually scroll to them.

Part B • Interactive Content

~12 min

- 1 **About** section: a heading + a short paragraph about the fest, plus a logo image using `<img>` with proper `alt` text.
- 2 **Schedule** section: a `<table>` with `<thead>` + `<tbody>` showing Event, Time & Venue — at least 3 rows.
- 3 **FAQ** block: at least **three** `<details>` + `<summary>` collapsibles (e.g. fees, eligibility, prizes). These expand on click — your main interactive win.

- 1 Add a `<form>` in the Register section, wrapped in a `<fieldset>` with a `<legend>`.
- 2 Include these fields, each with a properly linked `<label for>`:
 - Full Name — `type="text"`, `required`
 - Email — `type="email"`, `required`
 - Phone — `type="tel"` with `pattern` for 10 digits
 - Year of Study — a `<select>` dropdown (1st-4th)
 - Events to attend — `type="checkbox"` (3+ options)
 - T-shirt size — `type="radio"` (S / M / L / XL)
 - Preferred day — `type="date"`
 - Message — a `<textarea>`
- 3 Add a **Submit** and a **Reset** button. Try submitting empty — watch native validation block it.

- 1 Add a `<footer>` with the year and a "back to top" anchor link.
- 2 Open the file in a browser: confirm nav links jump, all FAQs expand, and the form blocks invalid submits.

Requirements Checklist

- | | |
|---|--|
| ☐ Valid HTML5 boilerplate + <code>lang</code> | ☐ Form inside <code><fieldset></code> + <code><legend></code> |
| ☐ Semantic header / nav / main / footer | ☐ text, email, tel, select, checkbox, radio, date, textarea all present |
| ☐ In-page anchor navigation works | ☐ Native validation (required + pattern/type) |
| ☐ Table with thead/tbody & 3+ rows | ☐ Every input has a linked <code><label></code> |
| ☐ 3+ working <code><details></code> accordions | ☐ Image with meaningful <code>alt</code> text |

STRETCH GOALS (BONUS)

- ★ Add a `<datalist>` for college-name autocomplete
- ★ Use `<input type="range">` for "Excitement level 1-10"
- ★ Add `<input type="color">` for a favourite team colour
- ★ Use `<optgroup>` to group events by track

SUBMISSION

1. Save the file as `index.html`.
2. Test it in Chrome — nav, FAQs & validation must work.
3. Push to GitHub or share a CodePen link in the batch group.

QUICK REFERENCE — INTERACTIVE HTML (NO JS NEEDED)

`<details><summary>Title</summary> ... </details>` — click to expand

`required` — field must be filled before submit

`type="email | tel | date | range | color"`

`<a href="#id">Go</a>` + `<section id="id">` — in-page jump

`pattern="[0-9]{10}"` — enforce a format

`<label for="x">` + `<input id="x">` — clickable labels
